Easy Steps

What is OSI MODEL

Developer Tips

Ron Fybish

Imagine that your house is made up of seven different rooms, each with a unique function.

Developer Tips

Ron Fybish

The first room is where you enter and leave the house

This functions like the Application layer in the OSI Model.

Ron Fybish

The second room is where you store all your important documents

This would be similar to the Presentation layer.

Ron Fybish

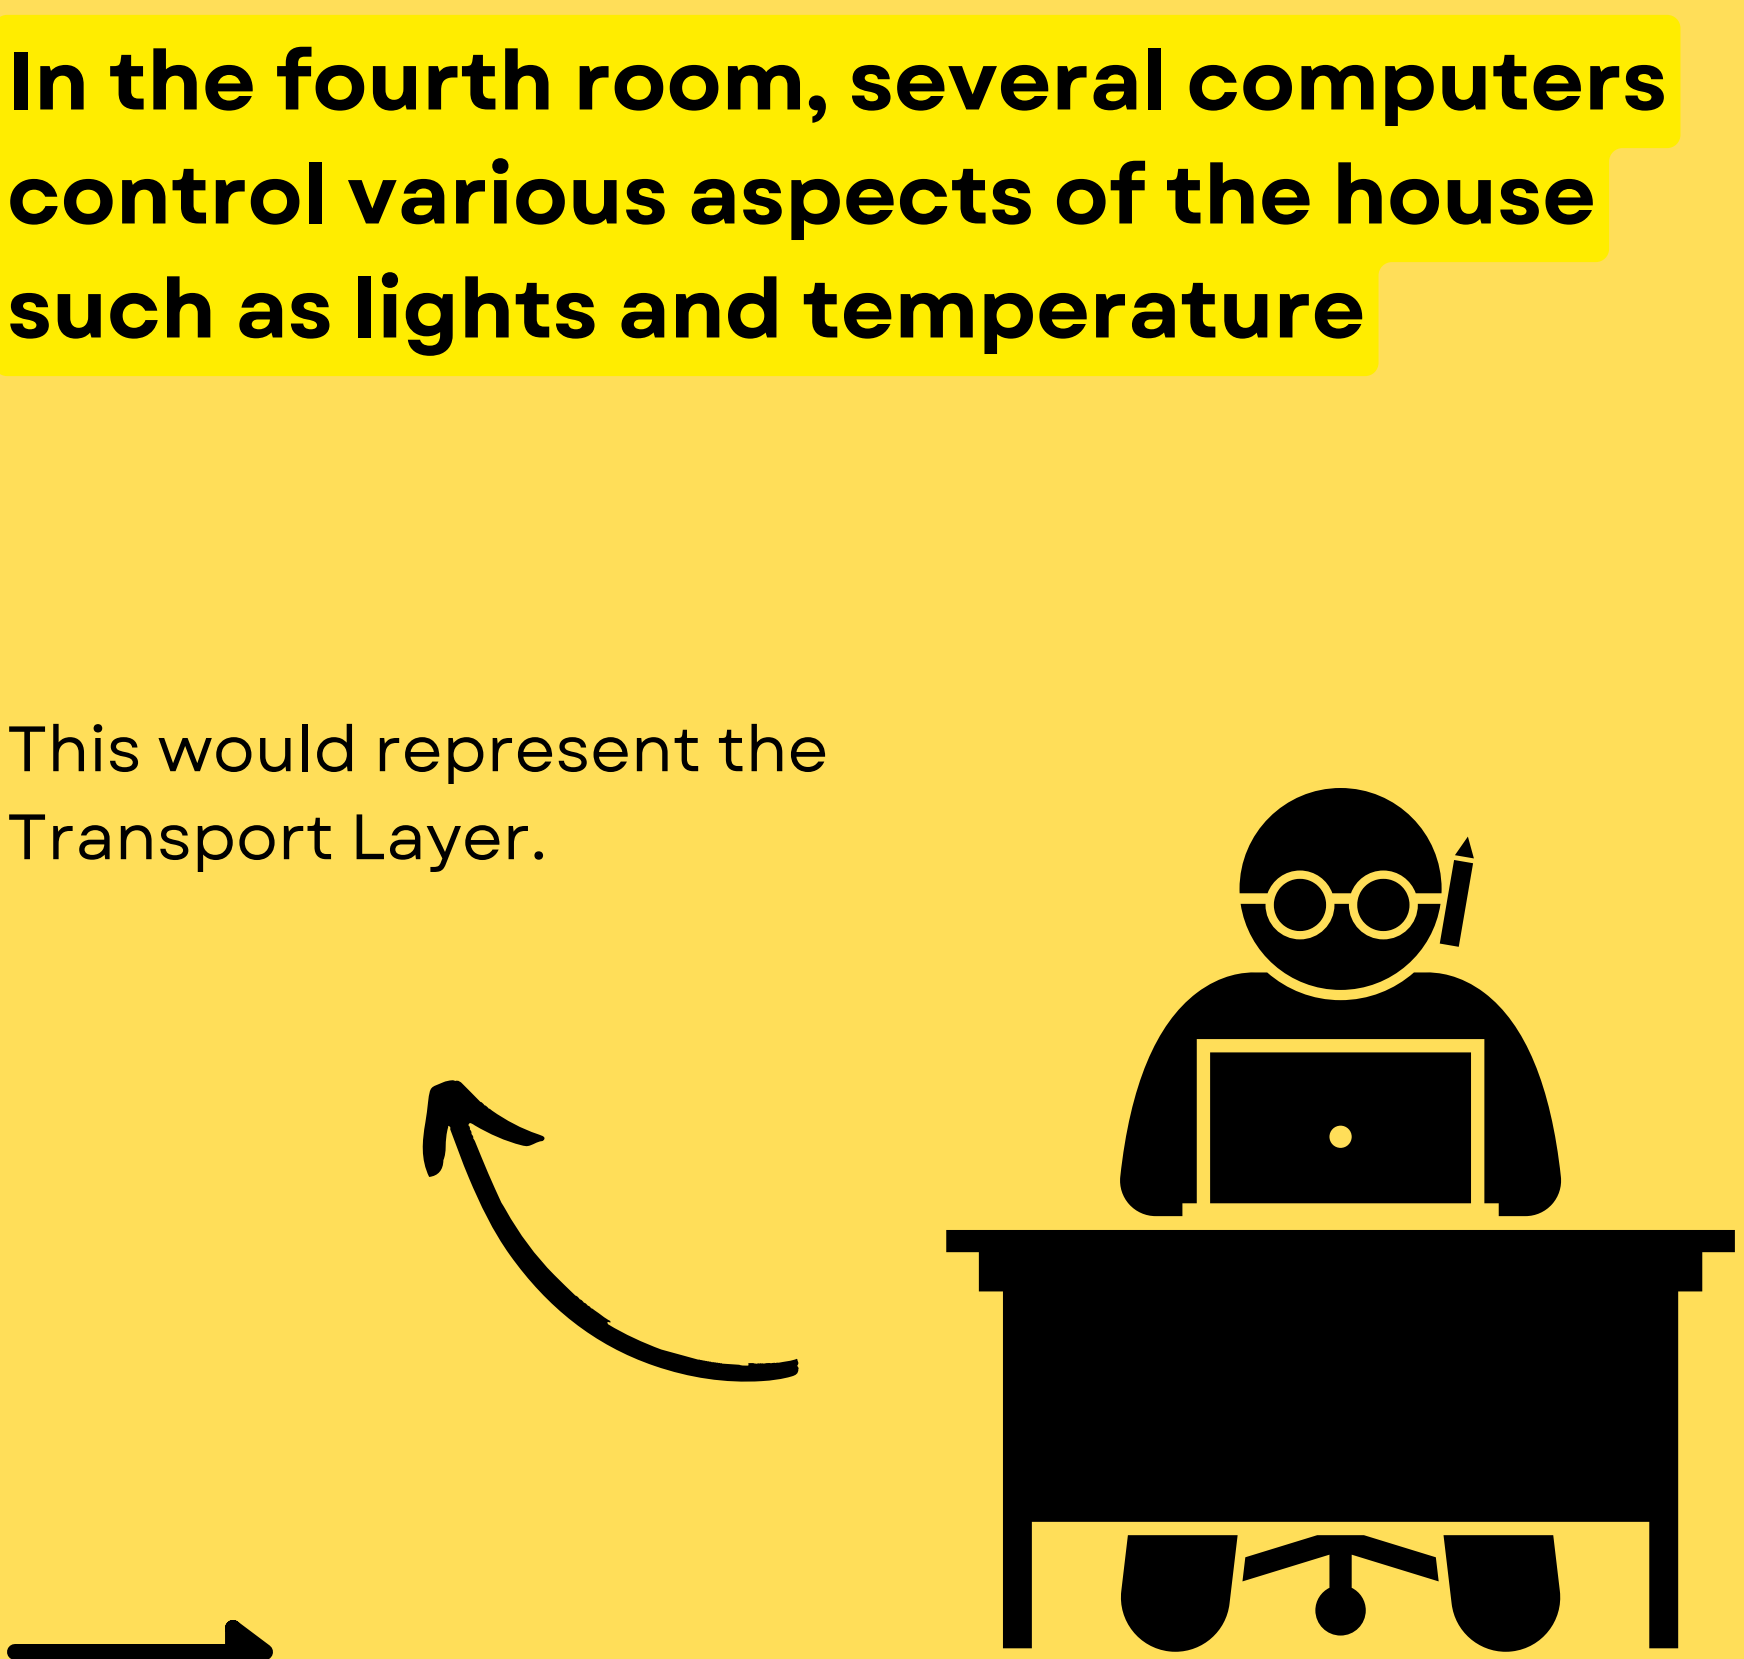
The third room contains all of your furniture and decorations

Can be compared to the Session layer.

Ron Fybish

In the fourth room, several computers control various aspects of the house such as lights and temperature

This would represent the Transport Layer.

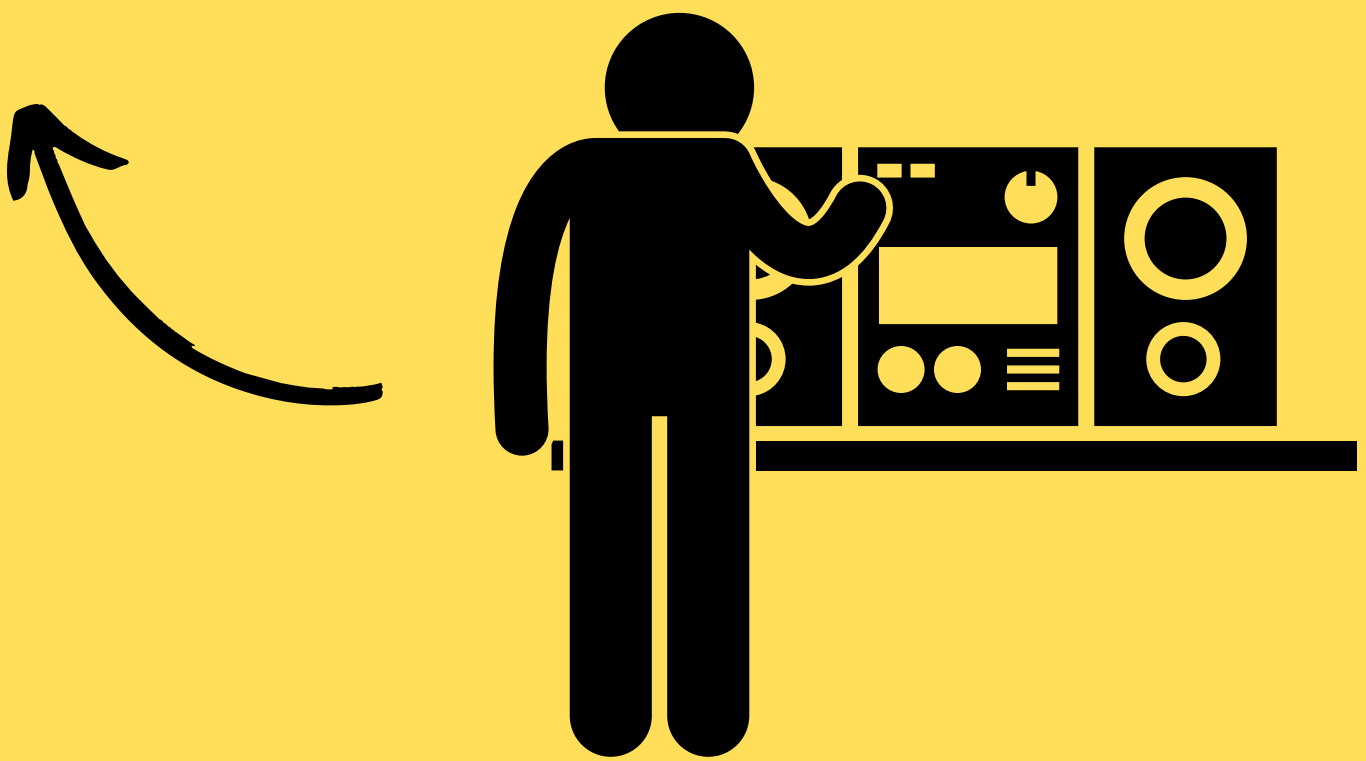


Developer Tips

Ron Fybish

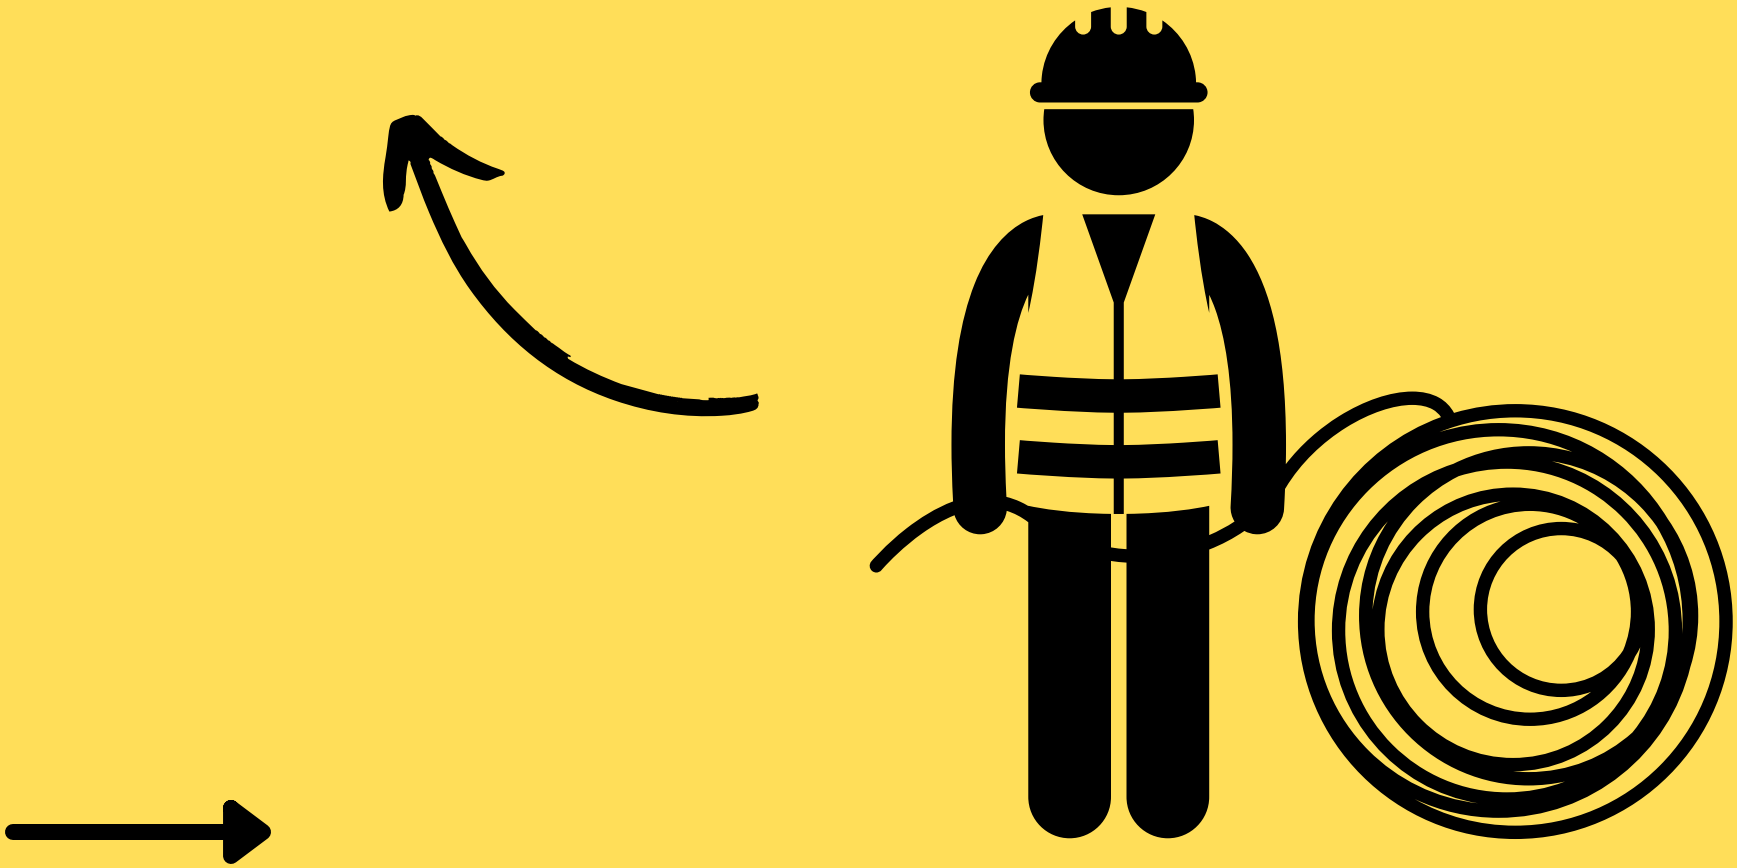
The fifth room holds all of your electrical devices

Which would equal to
the Network Layer



The sixth room contains all of the wiring and cables.

would be similar to the
Data Link layer.



Ron Fybish

Finally, the seventh room is where you keep your power supply

This compared to the Physical Layer.
